AUTOMATION

Custom machine
design for faster,
smarter assembly

Creative Solutions for Faster Assembly

MSC's design specialists are not just employees — they are inventors, known for their creativity and engineering innovation. It is through these processes that we devise the best way for our machines to meet the specific needs for your application. Give us a challenge, we'll find the solution.

The background of the advertisement features a large, detailed image of industrial machinery, likely a high-speed assembly machine, with various metal components, gears, and wiring. The logo 'MSC' is prominently displayed in the top left corner in a bold, white, sans-serif font. Below it, the word 'AUTOMATION' is written in a smaller, white, sans-serif font. The text 'IS...' follows, leading into the main body of text. A circular inset in the bottom left corner provides a close-up view of a specific component, possibly a connector or a part of the assembly mechanism, showing intricate details and a metallic finish. The overall color scheme is dominated by shades of blue and grey, with white text and highlights.

MSC

AUTOMATION IS...

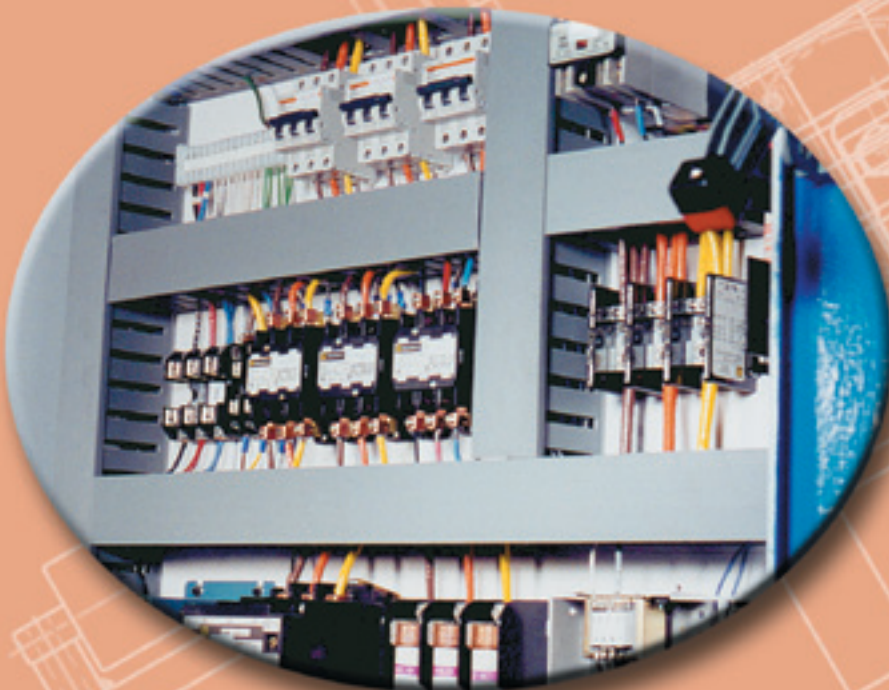

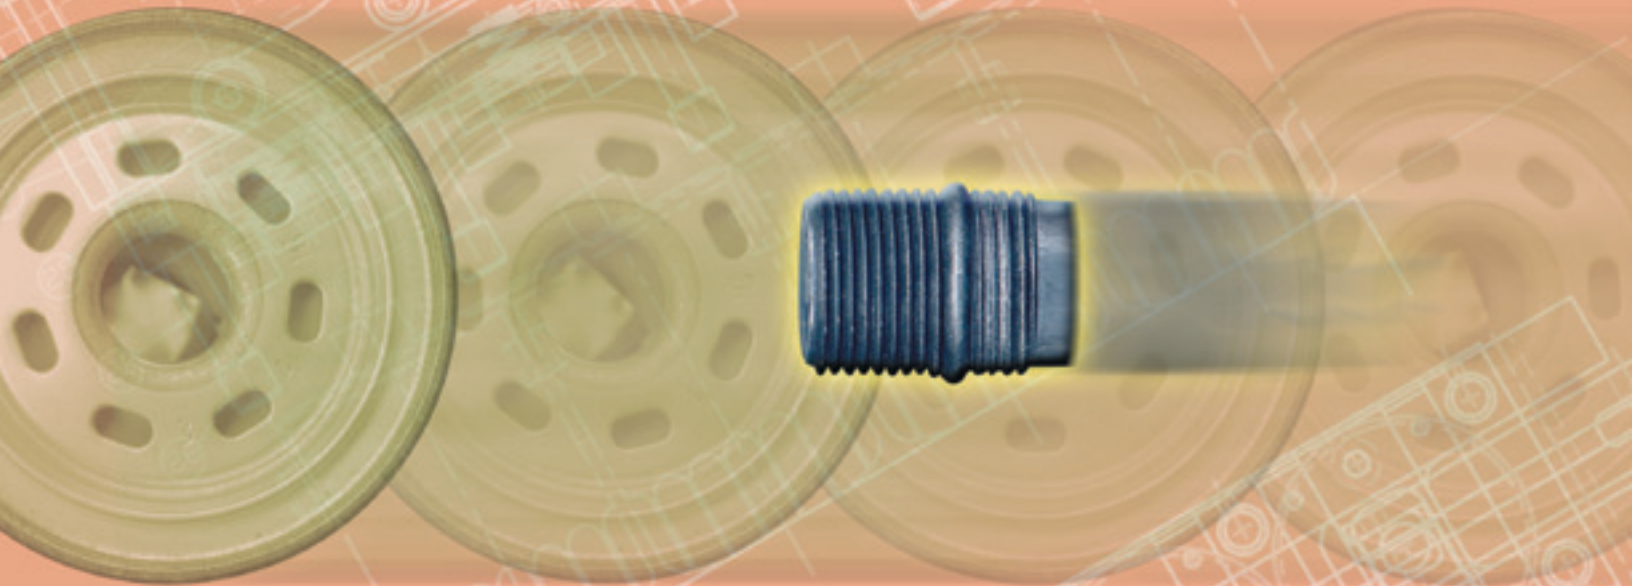

Innovative

We specialize in the design and manufacture of automated high-speed assembly equipment, built in our facilities from the ground up. Since MSC's machines are custom designed and built, we can choose the best way for your machine to operate.

If standard, off-the-shelf components won't fit your application, we will design ones that will. All MSC machines are designed to meet your needs, as well as our rigid standards for speed, accuracy and dependability.

Experienced

From contact insertion to fuel filters, laminations, fuses and more, MSC Automation is experienced with all types of motion and assembly systems.

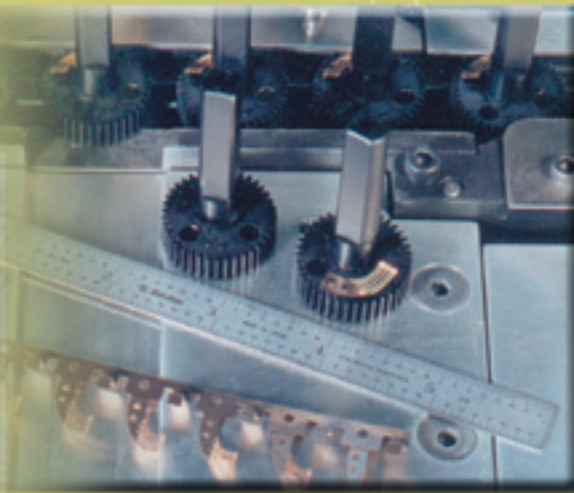

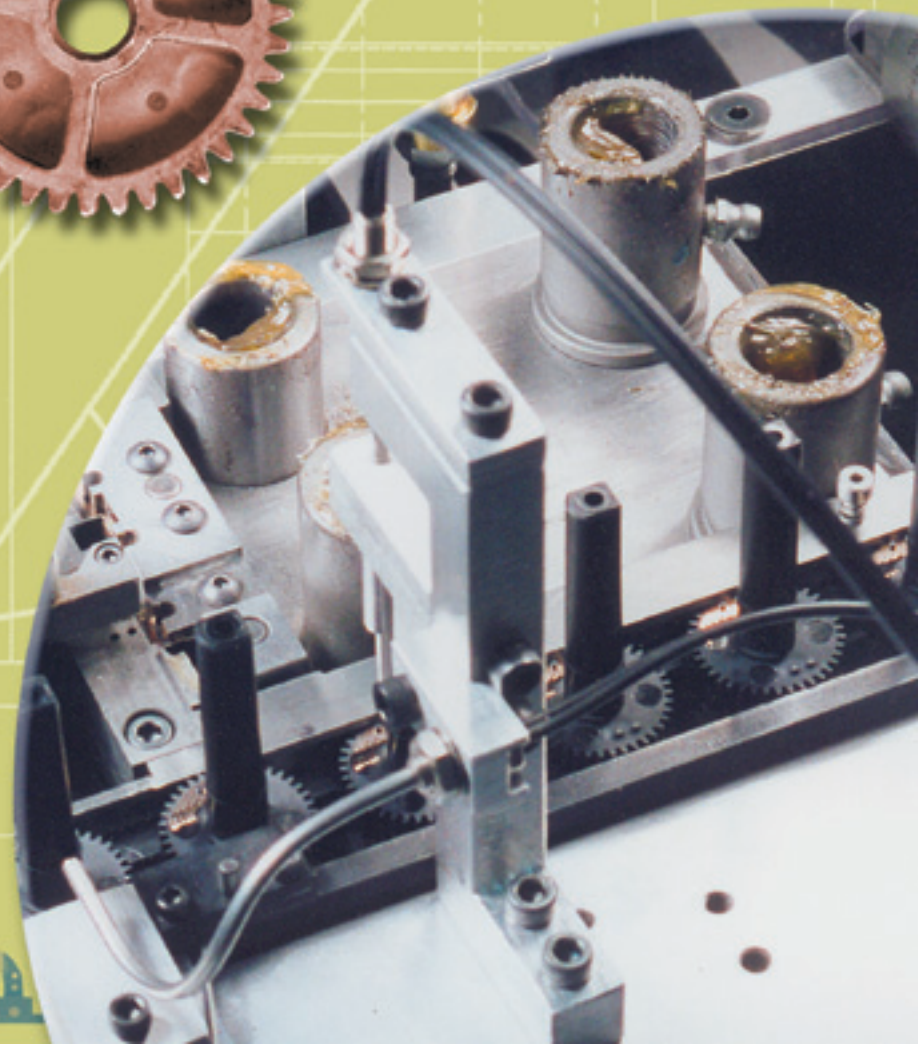

Our builders, machinists, designers, electricians and control engineers are experts in their fields. With over 50 years combined experience, our team will work to design and build a superior machine.

Resourceful

From concept to completion, MSC will create high-speed assembly machines that others won't — or can't — touch. Twenty parts per minute or 1,000 parts per minute: we can work with these numbers because we custom design, engineer and build machines to meet your motion-specific requirements for faster, better, component assembly.

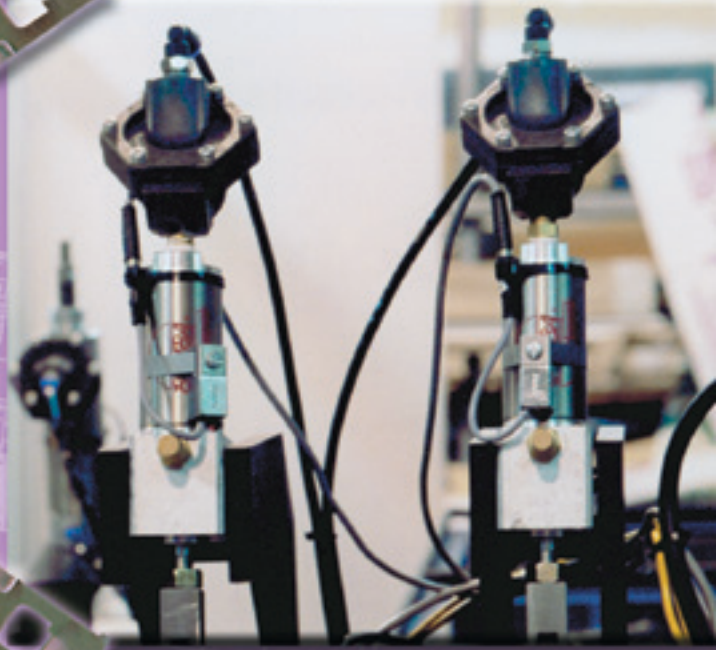

Committed

Quality and integrity are the driving forces behind MSC's machines. Each is built to exacting standards and must meet your — and MSC's — acceptance criteria. Nothing leaves our facility unless it is flawless. We are confident our machines will perform to your expectations. Backing this up is a one-year guarantee. Should a problem arise, we will correct it.

Dedicated

With MSC, you not only get better technical capabilities than the larger machine integrators can offer, you can also expect one-on-one service and a team dedicated to your unique needs. No hassles. No excuses. Every job, every client can expect uncompromising service.

MSC has a broad base of clients. Among them:

- Tyco-AMP • Purolator • Corning
- GE • USCONEC • Bussman • Eaton
- Magneti-Marelli • Pass & Seymour Legrand
- Porta-Nails, Inc. • Marley Pump

MSC Automation: Facts at a Glance

- Over 50 years experience in the custom machine design and building industry
- Service Capabilities: Custom design and build; engineering concepts only; assemble and build to print; machine to print
- Technical capabilities:
 - Extensive experience with all types of motion and assembly systems.
 - In-house expertise in PLC systems; microprocessor controlled servo drives; panel building and wiring.
 - Proficient in automotive standards and requirements
- Equipment Capabilities: Fully-functional on-site machine shop
- Personnel Capabilities: Journeymen tool and die makers; BSME project and design engineers; master machine builders; certified welder; master electrician

When you want
to run faster.

MSC AUTOMATION

We didn't invent motion.
We just perfected it.
